

Group Number: 5

	Marbles held before sinking	Draft (centimeters)	Comments about the stability of each type in stormy conditions
Flat Bottom	55	1.5	In waves that were as large as could be produced in the tank we had, the flat Galleon did not take on any water, but when the marbles shifted to one side it caused the ship to lean in one direction.
V-shaped Bottom	44	2.3	In waves that were as large as could be produced in the tank we had, the V-shaped Galleon did not take on any water, or have a tendency to capsize.
